

Create a single page application to show products and cost in the chosen currency.

1. Create a git repo in Github.com or any other platform and push all your code to it.
2. Use **React JS** for this assignment
3. Create a product page to display list of products. Each product has image, name and price in Indian Rupees.  
Just display any three products, get the images from google, set your price (using json object).

4. Create Currency dropdown with USD and INR.
5. If we change the currency to USD, then the price of the products should be displayed in us dollars by using the exchange rates obtained from the api\_
